

## Description of the KMZ Presentations

The zip file contains seven Google Earth compatible KMZ files. They allow a number of the Martini and d'Anville maps to be displayed in Google Earth and compared. There are also two files with 162 Fu (first level Provincial cities) level places from the Martini and du Halde Gazetteers. These can be plotted with relevant maps to assess the plotting accuracy.

| Presentation                   | Description   |
|--------------------------------|---|
| dAnville_Asia_SO.kmz           | D'Anville's map of central and East Asia with all of the areas surveyed by the Jesuit Brothers included.  |
| dAnville_Shensi_SO.kmz         | D'Anville's copied map of Chen Si province. This comprises three of today's Provinces: Shaanxi, Gansu and Ningxia. Originally sinusoidal projection |
| Jesuit_1721_Shensi_SO.kmz      | Map produced by the Jesuit Brothers in China and updated in 1721. Shows Chen Si and is original accuracy. Names of places in Chinese.               |
| duHalde_Fu_Places.kmz          | Contains 162 places at Fu Level from du Halde Gazetteer with names in the du Halde and Jesuit Brothers transliteration.                             |
| Martini_15p_SO.kmz             | Martini Map of the 15 Provinces of Ming China.  |
| Martini_ShanGan_orig_SO.kmz    | Martini Map of the Chan Si province defined above called Xensi in the Martini transliteration.  |
| Martini_Fu_Places.kmz          | Contains 162 places at Fu Level from Martini Gazetteer with names in the Martini transliteration  |
| Jesuit_1721_15Provinces_SO.kmz | The complete 1721 Mosaic of 15 Provinces for reference and comparison   |

The Maps are all stored at a remote web area and accessed by a Network Link. Sometimes it is slow to load – especially when accessed for the first time. As the cache builds up the access is faster. This allows the KMZ file to be small and if any revisions are made to the presentation there is no need to update the KMZ file.
